

JS Array Questions

Basic Level (1–15)

1. Create an array of 5 numbers and print it.
 2. Add an element at the end using push().
 3. Remove last element using pop().
 4. Add element at beginning using unshift().
 5. Remove first element using shift().
 6. Find length of array.
 7. Convert array to string using toString().
 8. Join array elements with - using join().
 9. Check if value exists using indexOf().
 10. Get last index of a value using lastIndexOf().
 11. Extract first 3 elements using slice().
 12. Remove 2 elements from index 1 using splice().
 13. Replace an element using splice().
 14. Reverse an array using reverse().
 15. Sort numbers using sort().
-

Intermediate Level (16–30)

16. Add multiple elements using push().
17. Remove multiple elements using splice().
18. Copy part of array using slice().
19. Merge two arrays using concat().
20. Convert array into comma-separated string using join().
21. Check if array contains a value using includes() (*allowed, not ES6 syntax concept*)
22. Remove duplicate values manually using loop + array methods.
23. Find max value using sort().
24. Find min value using sort().
25. Count occurrences of a number using indexOf() in loop.
26. Insert element at specific index using splice().
27. Delete element at specific index.

- 28. Convert string into array using `split()`.
 - 29. Combine string array into sentence using `join()`.
 - 30. Empty an array using different methods (`length = 0`, `splice()`).
-

Advanced Level (31–50)

- 31. Reverse array without using `reverse()` (use methods + logic).
- 32. Sort array in descending order.
- 33. Find second largest number using `sort()`.
- 34. Remove falsy values (0, null, undefined, "", false) manually.
- 35. Rotate array left by 1 position.
- 36. Rotate array right by 1 position.
- 37. Find common elements between two arrays.
- 38. Merge arrays and remove duplicates.
- 39. Flatten nested array (1 level) manually.
- 40. Convert array of numbers into string array.
- 41. Replace all occurrences of a value.
- 42. Find missing number from sequence.
- 43. Split array into chunks of size 2.
- 44. Find intersection of arrays.
- 45. Find union of arrays.
- 46. Move all zeros to end of array.
- 47. Check if array is palindrome.
- 48. Shuffle array elements.
- 49. Find first non-repeating element.
- 50. Remove element without using `splice()` (use `filter()` alternative logic but without arrow functions).
